II. Business performance forecast for the fiscal year ending March 31, 2014

• During the first quarter consolidated cumulative period, while sales decreased compared with the plan mainly due to delayed announcement of the subsidy policy and reduced amount of subsidy for some products in China, profits increased due to delayed occurrence of selling, general and administrative expenses and foreign exchange gains, etc. For future prospects, we have not made revisions to the business performance forecasts announced on May 13, 2013 in view of existence of many uncertain factors such as concerns for fluctuation of sales and foreign exchange caused by economic trend of both domestic and overseas, and downward pressure on earnings such as rising prices of raw materials.
